SUBJECT: Number 5 Fuel Oil Tank Closure at Luck's Plant,
Highway 705E, Seagrove, Randolph County

Dear Mr. Lucks:

This letter is to recap our telephone conversation at 9:00
a.m., November 6, 1991.

The cleanup leave assigned to the subject site is 190 PPM
Total Oil and Grease (T O & G) because of the reported background
sample results of 180 ppm T O & G by EPA Test Method 9071. As
the soil sample results received June 8, 1990, show readings of
350 PPM and 643 PPM T O & G by 9071, it will be necessary to take
one of the two following action:

Either, additional soil may be excavated until a T O & G of
<190 PPM is reached, or a groundwater monitoring well should be
placed just outside and downgradient of the tank pit. If a
monitor well is to be used, it should be sampled annually by Test
Method 625. The ten (10) most prominent peaks should be
identified on the 625.

If you have any questions, please feel free to contact me at
the letterhead address or telephone number.

Sincerely,

A handwritten signature in cursive script that reads "Thomas A. Salley".
